This is to update you that your request to recover recently deleted files from your Google Drive account is complete.

To protect your privacy, file names aren't visible to us and our tools don't choose which files to recover.

View your Recovered File(s)

1. **Desktop or web :** Sign in to your Google Drive account to view your recovered files,.
2. **Drive mobile app :** Please force close the app first before viewing your files.

Learn how to search and find a file.

Tip: If any of your recovered files were shared, it’s possible you have to reapply the sharing settings.

If you don’t find the files you want to recover, it's likely because they were deleted too long ago to be recovered.

If you have any other questions, you can reply to this email for assistance from the Google Drive support team.
